Public Health Officials Report Fourth Neuroinvasive WNV Case in El Paso

Residents Reminded Mosquito Bites Can Be Deadly

El Paso, Texas – The City of El Paso Department of Public Health (DPH) has confirmed its fourth case of the Neuroinvasive West Nile Virus (WNV) disease in the community.

A female in her 60s is confirmed to have contracted the WNV and developed Neuroinvasive disease. The patient has several underlying health conditions and is currently recovering in the hospital.

“The Severe Central Nervous System West Nile Virus disease is extremely dangerous and can lead to potential complications, disability or even death,” said City-County Health Authority Dr. Hector Ocaranza. “With the recent rain it is imperative that the public take precaution to decrease the risk of getting infected with WNV by practicing the four Ds to prevent mosquito bites.”

El Pasoans can help ‘fight the bite’ by following these 4 easy prevention steps:

- **DEET:** Use insect repellents that contain DEET when outdoors.
- **DRESS:** Wear long sleeves, long pants, and socks when outdoors.
- **DUSK & DAWN:** Although mosquitoes associated with WNV can be active throughout the day, residents should take extra care during peak mosquito biting hours (from dusk to dawn) or consider avoiding outdoor activities during these times.
- **DRAIN:** Drain standing water from flowerpots, gutters, buckets, pool covers, pet water dishes, and birdbaths. After rains or lawn watering, residents should “tip and toss” any standing water they find outside.

Symptoms of West Nile infection include fever, headache, tiredness, body aches, nausea, vomiting and swollen lymph glands. Eight out of 10 people infected with the WNV will not develop symptoms. However, 1 in 5 people who are infected develop West Nile fever, an illness that includes a fever and other symptoms such as body aches, joint pain, headache, or a rash. About 1 out of 150 infected people develop severe illness affecting the central nervous system and about 1 out of 10 cases of severe illness are fatal.

Residents can report standing water and mosquito breeding by calling (915) 212-6000.
